- Plastic accessories of drawers for cash handling
- Possibility of anchoring the safe to the floor
- Explicit marking of the workplace using the safes

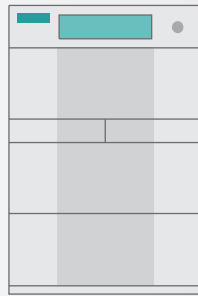

Timer Lock Safes of the series 1500 are used in open cash-handling workplaces for their safe operation. They protect the cash and documents during operation and prevent direct opening of the safe. The safe can be opened only after a preset time interval. This minimizes the risk of losses in case of a possible raid. The safe is protected by two cases of high rigidity. Modular construction makes it possible to meet the need of each customer. The electronic control with a microprocessor is an up-to-date facility which meets all safety standards for cash handling.
